Steve,

My estimate for two business days for R8 would be Tuesday afternoon, adding another day for Las Vegas as we discussed would be Wednesday.

We will try to finish sooner, but it also depends up me going through the information you just sent me for earlier questions (Shaw VOCs and water isotopes), and the new summary spreadsheet that has been revised.

I just finished the SVOCs so for Region 8 we still have DRO and GRO to per for the ADQ.

I haven't really started Las Vegas, the notebooks are going to be interesting to try and follow (I reviewed them quickly once), but if the data are rejected as you said I won't audited those. Originally I thought there was only 2 analyses for LV (ethoxylated compounds and acrylamide).

Thank you,

Dave

Subject: Sneak Preview of Pavillion Version 2

I thought sending this now would be helpful if you are working today. Its a draft of Version 2, we still have the SVOC, DRO, and GRO from Region 8 to audit along with NERLs to suites. I am thinking NERLs analyses will be in Version 3 but who knows I may get those done sooner.

In the checklist table, you were see things like:

For Version 2: yes for headspace (RSK) and P&T (Region 8) VOCs, water isotopes, dissolved gases, anions, MBAS,

This is our internal check, indicating that we have done that part of the audit for this analyses, and the answer to that question is yes. This will be removed when we send you the real version, but it is our internal status check. For issues where we are waiting on something (like VOC run logs) I have left in a note in that same table - again these will eventually be removed.

Note, Region 8 does not report all of the critical VOCs (they do not report ethanol, isopropanol, and TBA).

I can fix up the tables under Observation 2 a bit when I get a chance, but now the samples are listed here.
